

Q-TEC™ QWS Series High Efficiency Geothermal/Water Source Packaged Step-Capacity Heat Pump — R-410A

2 to 5 Ton **2-Stage Compressors**
Extended Range Operation: 25° to 110°F EWT

The Q-TEC Series self contained packaged water-to-air heat pump is designed to be installed inside a building structure against an exterior exposed wall when ventilation option is selected. When no ventilation option is used, the QWS Series units can be installed in any interior space accessible to water supply system and condensate drain.

Q-TEC's design provides "whisper" quiet operation with total comfort for the occupants at high efficiency levels and eliminates the need for roof-mounted equipment and outside condensing units and can meet your specific architectural requirements.

Q-TEC's "quiet technology" provides extremely low indoor sound levels by using special components and materials in the construction of the unit. By using special motors and sound insulation we have built a heat pump system that is significantly quieter than competitive product available today.

Q-TEC is suitable for both new construction and renovation projects for schools, modular buildings and light commercial buildings. A variety of ventilation options are designed to address your project's indoor air quality.

The Q-TEC Series unique design allows all maintenance and service to be performed inside the building to facilitate multi-story installations. Access to air filters and controls is accomplished through a hinged front panel for easy accessibility. All Q-TEC Series models are built on heavy duty permanent rollers for easy installation and removal.

Engineered Features

Step Capacity Compressor:

Copeland step capacity (2-stage) scroll compressors are designed for increased efficiency, quieter operation and improved reliability for longer life.

Reduced Sound Level:

Compressor sound cover and double isolation grommets reduce sound levels. Discharge muffler used on all models.

R-410A Refrigerant:

Designed with R-410A (HFC) non-ozone depleting refrigerant in compliance with the Montreal protocol and 2010 EPA requirements.

Liquid Line Filter Drier:

Standard on all models.

Phase Rotation Monitor:

Standard on all 3 phase scroll compressors. Protects against reverse rotation if power supply is not properly connected.

Indoor Blower System:

All models feature a variable speed (ECM) motor providing super high efficiency, low sound levels and soft start capabilities. The motor is self adjusting to provide the proper airflow rate at high static pressure for ducted installations without user adjustment or wiring changes. Dual blower and 30-second ramp up and ramp-down on motor used for quiet operation.

High Efficiency Coaxial Water Coil:

Fully insulated to minimize sweating. Copper or cupro-nickel coils available. Copper coils approved for Ground Loop and Closed Loop Boiler / Tower only.

Fluid Flow Switch:

Provided for coaxial coil to protect against loss of water flow.

Double O-Ring Water Connections (Optional):

Positive water-tight connections with built-in union. 1" female NPT fittings also available.

Pumping System:

Unit can be connected to central piping/pumping system from well field, boiler/tower or optional pump module can be installed inside unit for individual earth loop applications.

Copper Tube/Aluminum Fin Evaporator Coil:

Grooved copper tubing and enhanced aluminum fins provide maximum heat transfer and high energy efficiency. Evaporator coil constructed with hydrophilic fin stock that seals fin surface against aluminum oxide formation, is resistant to mold and mildew growth (tested to ASTM D3273, no growth) and reduces beading of condensate on the fin surface.

Cabinet:

Constructed of 20 gauge pre-painted or vinyl laminated galvanized steel. Choice of either two tone vinyl finish with "slate" front panels and "platinum" cabinet for designer appearance, or painted steel. Vinyl finish is very resistant to scratching and marring and is very easy to clean. Tamper resistant fasteners are provided for access panels. Unit includes built-in rollers for easy installation into wall sleeve and removal for service if necessary. Hinged, lockable front panel for filter service and access to primary functional electrical controls.

Insulation:

Cabinet is fully insulated with foil covered, high density fiberglass insulation with sealed edge treatment and special sound deadening insulation material in the compressor section. All insulation is designed to resist mold and mildew growth and facilitate ease of cleaning.

Electrical Components:

Are easily accessible for routine inspection and maintenance through front service panels. Circuit breaker standard on all 208/230V models and rotary disconnect standard on all 460V models. Circuit breaker/rotary disconnect access is through lockable access panel. Lock and key provided as standard equipment.

Hot Water Coil:

A plenum mounted hot water coil is available for both duct-free and ducted applications.

Air Filter:

Two-inch pleated MERV 8 filter is standard.

Compressor Control Module:

Built-in off-delay timer adjustable from 30 seconds to 5 minutes. Two-minute on-delay if power interrupt. 120-second bypass for low pressure control, and both soft and manual lockouts for high and low pressure controls.

High Pressure Switch:

Protects refrigerant circuit against excessively high pressure.

Low Pressure Switch:

Provides loss of charge protection plus protects against freeze-up of coaxial coil during heating mode due to water flow or temperature problems. Two switches are installed, and the factory wired switch is for fresh water applications.

Diagnostic Light:

System service - indicates high or low pressure switch operation for compressor protection. Located inside control panel.

Stainless Steel Drain Pan:

Provides extended life of the evaporator drain pan for maximum corrosion resistance.

Side Trim Piece Extension – Optional:

Trim kits available for covering the space between unit and wall for spaces from 4" to 12".

Optional Ventilation Packages:

Optional energy recovery ventilator can provide up to 450 cfm of outside air and exhaust through the unit while maintaining indoor comfort and humidity levels. Other available options include commercial room ventilator with exhaust, and barometric damper without exhaust. Outside wall and ventilation sleeve are required for installations with ventilation option.

Optional Ventilation Wall Sleeve:

Required for ventilation options only. Constructed of 16 gauge galvanized steel, coated with epoxy primer and a baked on polyester enamel paint, which allows it to withstand 1000 hours of salt spray tests per ASTM B117-03. Ordered separately.

Indoor Blower Performance – CFM (0.00" through 0.50" H ₂ O)						
Model	Rated ESP.	Max. ESP ①	Blower Only ②	Rated 1st Stage	2nd Stage De-Rated ③	2nd Stage Rated ④
QW2S2	0.10	0.5	600	800	900	950
QW3S2	0.15	0.5	675	900	1050	1150
QW4S2	0.20	0.5	825	1200	1300	1450
QW5S2	0.20	0.5	875	1400	1500	1650

NOTE: These units are equipped with a variable speed (ECM) indoor motor that automatically adjusts itself to maintain approximately the same rate of indoor airflow in both heating and cooling, dry and wet coil conditions, and at both 230/208 or 460 volts.

- ① Maximum ESP (inches WC) shown is with 2" MERV 6 pleated filter.
- ② Continuous CFM the total airflow being circulated during continuous blower operation.
- ③ Optional 2nd Stage CFM – the unit is factory shipped to operate on full 2nd Stage airflow. If the optional 2nd Stage airflow is desired, it requires removal of gray wire from "Y2" terminal of low voltage terminal strip in unit main control panel. This reduces system capacity performance by approximately 2% total (-4% Sensible, +2% Latent) at the same energy efficiency.
- ④ Rated CFM for ducted applications – required for maximum performance rating.

① ISO Standard 13256-1:1998, "Water to Air and Brine to Air Heat Pumps", which includes watt allowance for water pumping. Cooling capacity based on 80.6°F DB, 66.2°F WB entering air temperature. Heating capacity based on 68°F DB entering air temperature.

All 1-phase models meet the minimum efficiency requirements of the Energy Star (ES) efficiency program for Ground Loop applications. Currently, there is no ES efficiency program for 3-phase equipment or for Water Loop applications.

NOTE:

For pump options 3, 4 and 5 add 1.5 head to Table values as allowance for QW*S internal piping.

Additional feet head allowance for external piping to loop must be included and determined by others.

Required Flow Rates for Water Loop Installations

	QW2S	QW3S	QW4S	QW5S
Flow rate required GPM fresh water	6.1	8.6	11.5	13.7

Required Flow Rates for Ground Loop Installations

	QW2S	QW3S	QW4S	QW5S
Flow rate required GPM Methanol, Propylene Glycol or Ethanol ①	7	8	9	11

① See Antifreeze table below.

Antifreeze Percentages by Volume for Ground Loop Installations ①

Type	Minimum Temperature for Freeze Protection			
	10°F (-12.2°C)	15°F (-9.4°C)	20°F (-6.7°C)	25°F (-3.9°C)
Methanol	25%	21%	16%	10%
Ethanol ②	29%	25%	20%	14%
100% USP Food Grade Propylene Glycol	27%	24%	20%	13%

① Loop antifreeze protection must be determined based on loop design and geographic location.

② Must not be denatured with any petroleum based product.

Unit Charge Rates

UNIT	Std. Unit - Lbs.	Dehum. Units - Lbs.
QW2S2 - High Efficiency Step Capacity Geothermal Indoor Heat Pump	6.1875	6.1875
QW3S2 - High Efficiency Step Capacity Geothermal Indoor Heat Pump	6.00	6.00
QW4S2 - High Efficiency Step Capacity Geothermal Indoor Heat Pump	7.0625	7.0625
QW5S2 - High Efficiency Step Capacity Geothermal Indoor Heat Pump	7.625	7.625

Ventilation System Packages — Optional

Q-TEC models are designed to provide optional ventilation packages to meet all of your ventilation and indoor air quality requirements. All ventilation packages are factory installed. If no option is ordered, the ventilation intake and exhaust are sealed with a blank-off plate.

NOTE: A ventilation wall sleeve QWVS42 with outdoor louver grille is required for all installations that intend to utilize one of the built-in ventilation options of the QW*S Series heat pumps. If a ventilation option is not to be utilized, do not order ventilation wall sleeve.

COMMERCIAL ROOM VENTILATOR (Option V)

OPTIONAL

The built-in commercial room ventilator is internally mounted and allows outside ventilation air, up to 50% of the total airflow rating of the unit, to be introduced through the ventilation louver grille. It includes a built-in exhaust air damper. Spring return on power loss or deactivation. The commercial room ventilator (CRV) is a simple and innovative approach to improving the indoor air quality by providing fresh air intake and exhaust capability through the CRV. The damper can be easily adjusted to control the amount of fresh air supplied into the building. The CRV can be controlled by indoor blower operation or field controlled based on room occupancy. Complies with ANSI/ASHRAE Standard 62.1 "Ventilation for Acceptable Indoor Air Quality".

COMMERCIAL ROOM VENTILATOR (Option W)

OPTIONAL

The built-in commercial room ventilator is internally mounted and allows outside ventilation air, up to 50% of the total airflow rating of the unit, to be introduced through the ventilation louver grille. It includes a built-in exhaust air damper. Spring return on power loss or deactivation. The commercial room ventilator (CRV) is a simple and innovative approach to improving the indoor air quality by providing fresh air intake and exhaust capability through the CRV. The damper can be easily adjusted to control the amount of fresh air supplied into the building. The CRV can be controlled by indoor blower operation or field controlled based on room occupancy. Complies with ANSI/ASHRAE Standard 62.1 "Ventilation for Acceptable Indoor Air Quality". Option W has 0 - 10 VDC actuator for DDC control by others.

ENERGY RECOVERY VENTILATOR (Option R)

OPTIONAL

The energy recovery ventilator (ERV) is a highly innovative approach to meeting indoor air quality ventilation requirements as established by ANSI/ASHRAE Standard 62.1. The ERV is internally mounted and allows up to 450 CFM (depending upon speed setting) of fresh air and exhaust through the unit while maintaining superior indoor comfort and humidity levels. In most cases this can be accomplished without increasing equipment sizing or operating costs. Heat transfer efficiency is up to 64% during summer and 79% during winter conditions.

The ERV consists of a unique "rotary energy recovery cassette" that provides effective sensible and latent heat transfer capabilities during summer and winter conditions. Various control schemes are addressed including limiting ventilation during building occupancy only. The ERV has a filter for the exhaust air to keep the rotary wheels clean and free of any debris introduced through the room return air grille. The intake and exhaust rates can be independently selected. Factory set on medium intake and low exhaust. Intake and exhaust air paths have shut-off dampers to eliminate the ingress of outside air when ventilation system is off.

ENERGY RECOVERY VENTILATOR (Option S)

OPTIONAL

The energy recovery ventilator (ERV) is a highly innovative approach to meeting indoor air quality ventilation requirements as established by ANSI/ASHRAE Standard 62.1. The ERV is internally mounted and allows up to 450 CFM (depending upon speed setting) of fresh air and exhaust through the unit while maintaining superior indoor comfort and humidity levels. In most cases this can be accomplished without increasing equipment sizing or operating costs. Heat transfer efficiency is up to 64% during summer and 79% during winter conditions.

The ERV consists of a unique "rotary energy recovery cassette" that provides effective sensible and latent heat transfer capabilities during summer and winter conditions. Various control schemes are addressed including limiting ventilation during building occupancy only. The ERV has a filter for the exhaust air to keep the rotary wheels clean and free of any debris introduced through the room return air grille. The intake and exhaust rates can be independently selected. Factory set on medium intake and low exhaust. Intake and exhaust air paths have shut-off dampers to eliminate the ingress of outside air when ventilation system is off.

Equipped with Intelligent Frost Control that cycles the ventilation air intake damper closed for 4 minutes out of every 32 minutes of ERV operation when the outdoor air is below 10°F. This sequence allows the ERV to operate with zero outdoor air intake and allows conditioned room air to defrost any accumulated frost if present on the cassette wheels.

ENERGY RECOVERY VENTILATOR (Option T)

OPTIONAL

The energy recovery ventilator (ERV) is a highly innovative approach to meeting indoor air quality ventilation requirements as established by ANSI/ASHRAE Standard 62.1. The ERV is internally mounted and allows up to 450 CFM (depending upon speed setting) of fresh air and exhaust through the unit while maintaining superior indoor comfort and humidity levels. In most cases this can be accomplished without increasing equipment sizing or operating costs. Heat transfer efficiency is up to 64% during summer and 79% during winter conditions.

The ERV consists of a unique "rotary energy recovery cassette" that provides effective sensible and latent heat transfer capabilities during summer and winter conditions. Various control schemes are addressed including limiting ventilation during building occupancy only. The ERV has a filter for the exhaust air to keep the rotary wheels clean and free of any debris introduced through the room return air grille. The intake and exhaust rates can be independently selected. Factory set on medium intake and low exhaust. Intake and exhaust air paths have shut-off dampers to eliminate the ingress of outside air when ventilation system is off.

Additional controls to permit lower ventilation intake airflow (105 - 225 CFM based on selected intake blower speed and room tightness) and controlled by an occupancy signal, and then can increase to maximum of 450 CFM and controlled by CO₂ input signal.

① Maximum size of the time delay fuse or HACR type circuit breaker for protection of field wiring conductors.

② Based on 75°C copper wire. All wiring must conform to the National Electrical Code and all local codes.

③ These "Minimum Circuit Ampacity" values are to be used for sizing the field power conductors. Refer to the National Electrical Code (latest revision) article 310 for power conductor sizing.

Installation Overview of Ventilation Wall Sleeve

Exterior Wall View

NOTE: OPENING DIMENSIONS ARE $\pm .250$

NOTE: Wall opening and wall sleeve required only when one of the ventilation options is utilized. Installations not utilizing any ventilation option can be made in any interior space accessible to electrical supply, water supply system and condensate drain.

MIS-2739 B

Unit and Wall Sleeve Opening

Supply Duct Connections for Ducted Installations

MIS-2742 A

ORS-Series Sound Plenum

The QRS3 - QRS5 Series Sound Plenum has been designed for use with QW*S units. Installation is quick and easy with removal/replacement of six existing screws from the unit cabinet. Once installed the sound plenum enhances the current quiet operation of the Q-TEC Series units, and the hinged door with cam locks (one lockable) provides easy access to the basic Q-TEC system. Model selection is based on equipment cabinet size and finish.

Sound Plenum Part Number	Plenum Finish	Compatible with Equipment Selection
QRS3-X QRS3-4 QRS3-V	Painted Steel - Beige Painted Steel - Buckeye Gray Texture Vinyl ①	QW2S & QW3S
QRS5-X QRS5-4 QRS5-V	Painted Steel - Beige Painted Steel - Buckeye Gray Texture Vinyl ①	QW4S & QW5S

① Front Panels Slate Finish; Side Panels Gray Paint.

UNIT	DIM. "A"
QRS3	42"
QRS5	48"

Features:

- Compatible with new or existing QWS units.
- Removable cam latch hinged doors, with center latch lockable.
- Easy unit service design.
- Sound absorbing insulation.
- Reduces equipment operating levels and general muffling of basic unit operation. Actual sound reduction may vary depending upon site variables.

MIS-2794

MIS-2267

QRASP – Series Return Air Sound Plenum

The QRASP3 - QRASP5 Series Sound Plenum has been designed for use with sound absorbing side panels. It is similar in design to the QSP Sound Plenum, but also incorporates additional sound attenuation panels on both sides as shown. Installation is quick and easy with removal/replacement of six existing screws from the unit cabinet. Once installed the sound plenum enhances the current quiet operation of the Q-TEC Series units, and the hinged door with cam locks (one lockable) provides easy access to the basic Q-TEC system. Model selection is based on equipment cabinet size and finish.

Sound Plenum Part Number	Plenum Finish	Compatible with Equipment Selection
QRASP3-X QRASP3-4 QRASP3-V	Painted Steel - Beige Painted Steel - Buckeye Gray Texture Vinyl ①	QW2S & QW3S
QRASP5-X QRASP5-4 QRASP5-V	Painted Steel - Beige Painted Steel - Buckeye Gray Texture Vinyl ①	QW4S & QW5S

① Front Panels Slate Finish; Side Panels Gray Paint.

Features:

- Compatible with new or existing QW*S units.
- Removable cam latch hinged doors, with center latch lockable.
- Easy unit service design.
- Incorporates additional sound absorbing side panels.
- Sound absorbing insulation.
- Reduces equipment operating levels and general muffling of basic unit operation. Actual sound reduction may vary depending upon site variables.

Optional Accessories — Must be Used for Each Installation with Ventilation Options

Ventilation Wall Sleeves:

QWVS42 Ventilation wall sleeve for walls up to 14 inches thick. **NOTE:** Unless they are to be field-supplied, side trim kit must be ordered for all installations.

Ventilation Louvers:

- QLW-10 Standard Clear Painted Enamel Finish for vent option
- QLW-20 Standard Medium Bronze Painted Enamel Finish for vent option
- QLW-30 Standard Dark Bronze Painted Enamel Finish for vent option
- QLW-* Optional Louver Finishes available (See Form S3508)

Contact your Bard Sales Representative for Custom Finish Louver information

Side Trim Kits — Required for All Installations Unless Field-Supplied

NOTE: The following accessory items must be selected so the finish (color) is matched to the QWS model that they will be used with.

Side Trim Extension Kits:

Model	Color	Model	Color	Model	Color	Model	Color	Space from back of unit to wall	Unit Compatibility
QSTX-V-6	Platinum Vinyl	QSTX-4-6	Gray Paint	QSTX-X-6	Beige Paint	QSTX-1-6	White Paint	4" to 6"	All
QSTX-V-8	Platinum Vinyl	QSTX-4-8	Gray Paint	QSTX-X-8	Beige Paint	QSTX-1-8	White Paint	6" to 8"	All
QSTX-V-10	Platinum Vinyl	QSTX-4-10	Gray Paint	QSTX-X-10	Beige Paint	QSTX-1-10	White Paint	8" to 10"	All
QSTX-V-12	Platinum Vinyl	QSTX-4-12	Gray Paint	QSTX-X-12	Beige Paint	QSTX-1-12	White Paint	10" to 12"	All

Optional Accessories — Additional Items as Determined by Job Specifications

QPBX48-10-V	Platinum Vinyl	QPBX48-10-4	Gray Paint	QPBX48-10-X	Beige Paint	QPBX48-10-1	White Paint	Use with QPB48 or QPBS48 (adjusts to ceilings up to 10'5")	QW4S, QW5S

Cabinet Extensions for Ducted Applications:

Model	Color	Model	Color	Model	Color	Space from back of unit to wall	Unit Compatibility		
QCX10A-V	Platinum Vinyl	QCX10A-4	Gray Paint	QCX10A-X	Beige Paint	QCX10A-1	White Paint	20" height (adjusts for ceilings up to 9'7"; add QPBX42-9 for 9'7" to 10'3" finished ceiling heights)	QW2S, QW3S
QCX15A-V	Platinum Vinyl	QCX15A-4	Gray Paint	QCX15A-X	Beige Paint	QCX15A-1	White Paint	20" height (adjusts for ceilings up to 9'7"; add QPBX48-9 for 9'7" to 10'3" finished ceiling heights)	QW4S, QW5S

Hot Water Coils with Plenum Boxes:

Model	Color	Model	Color	Model	Color	Space from back of unit to wall	Unit Compatibility		
QPBHW42-F-V	Platinum Vinyl	QPBHW42-F-4	Gray Paint	QPBHW42-F-X	Beige Paint	QPBHW42-F-1	White Paint	Free blow plenum box	QW2S, QW3S
QPBHW48-F-V	Platinum Vinyl	QPBHW48-F-4	Gray Paint	QPBHW48-F-X	Beige Paint	QPBHW48-F-1	White Paint	Free blow plenum box	QW4S, QW5S
QPBHW42-D-V	Platinum Vinyl	QPBHW42-D-4	Gray Paint	QPBHW42-D-X	Beige Paint	QPBHW42-D-1	White Paint	Ducted plenum box	QW2S, QW3S
QPBHW48-D-V	Platinum Vinyl	QPBHW48-D-4	Gray Paint	QPBHW48-D-X	Beige Paint	QPBHW48-D-1	White Paint	Ducted plenum box	QW4S, QW5S

NOTE: The same top fill system and cabinet extensions can be used with hot water coil plenum boxes as with standard plenum boxes.

⊕ 8" Plenum Box height may affect sound level of supply air and unit.

WATER CONNECTION OPTIONS

Female National Pipe Thread (NPT) Connections (Piping Option "P")

1" Female National Pipe Thread (NPT) copper fitting connections at inlet and outlet of co-axial water coil. No internal pump options available with piping option "P".

Double O-Ring Water Connections (Piping Option "X")

IMPORTANT NOTE: Water coils can be equipped with male half of double O-ring fittings and a mating half must be used. No other type of fitting will mate up. The DORFC Flow Centers also have double O-ring connections on both heat pump and loop sides of flow center.

Depending upon pump and piping options ordered, additional double O-ring fittings and hose may be required. Fittings are available for threaded, barbed, soldered and fusion connections.

Flow Centers & Individual Pumps w/Double O-Ring Connections (See Pump Ratings Below)

Pump Option	Pump Model	No. of Pumps	Description	Installation Method
1	DORFC-1	1	Loop Flow Center w/Insulated Cabinet, 230V-60Hz-1Ph, Double O-ring Fittings, UP26-99F Pump, Brass Isolation & Flush Valves Built-In	Can be factory or field installed
2	DORFC-2	2	Loop Flow Center w/Insulated Cabinet, 230V-60Hz-1Ph, Double O-ring Fittings, UP26-99F Pump, Brass Isolation & Flush Valves Built-In	
3	UPS15-42F	1	Pump with Isolation Valves, 230V-60Hz-1Ph, Piped to Rear of Cabinet, Double O-ring Connections	Factory installed only
4	UP26-64F	1	Pump with Isolation Valves, 230V-60Hz-1Ph, Piped to Rear of Cabinet, Double O-ring Connections	
5	UPS26-99FC	1	Pump with Isolation Valves, 230V-60Hz-1Ph, Piped to Rear of Cabinet, Double O-ring Connections	

DORFC-2

UPS26

Flow Center and Individual Pump Accessories

Bard Part Number	Required Quantity	Description	Used With
QWRK	1	Consists of control relay, two 3A circuit breakers, all wiring and all installation parts	Included with factory installed DORFC Flow Centers and UPS Pumps. Order only if field installing any flow center or pump.
QWHK	1	Consists of two 1" x 33" 200 PSIG hoses with SS braided sheathing and fitted with straight double o-ring fittings one end and 90° elbow double o-ring fittings with P/T ports installed on opposite end.	Included with units for factory installed DORFC's. Order only if field installing DORFC.

① This is factory installed if flow center or pump is factory installed.

① Pump output shown in feet head @ GPM at top of columns.

② Refer to Water Coil Pressure Drop table (Page 8) for feet head allowances for basic QW*S complete system. Additional feet head allowance from basic unit to main piping loop must be included and determined by others.

③ Pump options shown can be factory installed in models as shown. Suitability of each must be determined by others based on QWS requirements, plus the loop design requirements designed by others.

Ground Loop Service Accessories for Installations with DORFC Flow Centers

Heat Pump Model	Bard Part Number	Required Quantity	Description
		DORCL1-90	Each
	CLB1-S	Each	(2) 1" straight barbed quick-connect cam-lever female fittings to connect to DORCL1-90 fittings above
	GGK-1	Each	(1) Geo-Gooser w/shut-off valve, 0-100 PSI gauge, garden hose connection, P/T fitting 1/8" probe
	DORGHMT	Each	(2) Double o-ring x male garden hose adapter fitting for loop flow center (to burp/boost loop)

QW*S Step Capacity Series Q-TEC Geothermal HP Model Nomenclature

NOTE:

- ① Insert "D" for dehumidification with hot gas reheat. Reference 7960-658 for complete details.
- ② If "X" control option is selected, then thermostat and humidistat, if applicable, or DDC control system must be field supplied.
- ③ CS9B-THO and -THOC are BACnet w/shielded twisted pair wiring.
- ④ CS9BE-THO and -THOC are BACnet w/shielded twisted pair wiring and Ethernet port.
- ⑤ Not available for Dehumidification Models.

FACTORY INSTALLED PUMP & PIPING OPTIONS

- X - None; all pump & water connections field installed, requires field piping to the coaxial water coil using double o-ring fittings, which must be ordered separately.
- P - None; all pump & water connections field installed, requires field piping to the coaxial water coil 1" Female NPT wrought copper fittings.
 - 1 - DORFC-1 double o-ring flow center, single Grundfos UP26-99F pump piped to water coil with 150 PSI reinforced hose
 - 2 - DORFC-2 double o-ring flow center, double Grundfos UP26-99F pump piped to water coil with 150 PSI reinforced hose
 - 3 - Single Grundfos UPS15-42F pump, isolation valves both ends, piped with copper to double o-ring fittings back corners of unit
 - 4 - Single Grundfos UP26-64F pump, isolation valves both ends, piped with copper to double o-ring fittings back corners of unit
 - 5 - Single Grundfos UPS26-99-FC pump, isolation valves both ends, piped with copper to double o-ring fittings back corners of unit

See Pages 23, 24 & 25 for Additional Required and Optional Field Installed Accessories

Optional Field Installed Hard Start Kits for 1-Phase Models ①	
Unit Model	Field Installed Part Number
QW2S2-A only	SK111
QW3S2-A only	SK111
QW4S2-A only	SK118
QW5S2-A only	SK118

① Start Capacitor and potential relay start kit can be used with all -A single phase models only. Increases starting torque 9x. Not used on -B or -C three phase models.

Optional Field Installed Evap. Drain Pan Overflow Kit	
Part Number	Description
8620-219	24VAC 0.4A SPST NC Switch to shutdown compressor. Can be converted to NO action to use for alarm circuit.
